

Box Elder/Weber Employment Control Total Splits

1. RETL = (County RETL) x (RETL_PCT)
2. FOOD = (County FOOD) x (RETL_PCT)
3. MANU = (County MANU) x (IND_PCT)
4. WSLE = County WSLE x (IND_PCT)
5. OFFI = (County OFFI) x (OFFI_PCT)
6. For remaining sectors, find the factor to apply:
 - a. Get the total number of jobs for each model area = (County Total Jobs) x (TOTAL_PCT)
 - b. The sum of all the jobs in each model area should equal the total number of jobs for each model area.
 (County Total Jobs) x (TOTAL_PCT) = Sum of all job sectors
 RETL + FOOD + MANU + WSLE + OFFI + GVED + HLTH + OTHR +
 FM_AGRI + FM_MING + FM_CONS
 - c. The first five TDM job sectors have their own percentages. We need to find the factor to apply for all other sectors.
 (County Total Jobs) x (TOTAL_PCT) =
 (RETL + FOOD + MANU + WSLE + OFFI) +
 [FACTOR] x (CO_GVED + CO_HLTH + CO_OTHR + CO_FM_AGRI +
 CO_FM_MING + CO_FM_CONS)

$$FACTOR = \frac{(County\ Total\ Jobs) \times (TOTAL_PCT) - (RETL + FOOD + MANU + WSLE + OFFI)}{(CO_GVED + CO_HLTH + CO_OTHR + CO_FM_AGRI + CO_FM_MING + CO_FM_CONS)}$$

7. GVED = (County GVED) x (FACTOR)
8. HLTH = (County HLTH) x (FACTOR)
9. OTHR = (County OTHR) x (FACTOR)
10. FM_AGRI = (County FM_AGRI) x (FACTOR)
11. FM_MING = (County FM_MING) x (FACTOR)
12. FM_CONS = (County FM_CONS) x (FACTOR)
